ORDERING INFORMATION

Product Codes	Description	Features
V1700	Reflectance Sensor	The reflectance sensor can be applied to the ventral tail base of a patient and secured with a cohesive bandage. For cats and dogs, if the sensor is inserted rectally the red light should be shining on the sphincter muscle.

Servicing Isoflurane and Sevoflurane Classic T3™ Vaporizers

Regular annual service is recommended to ensure proper vaporizer calibration. Cleaning involves taking the vaporizer apart and cleaning every component inside and replacing gaskets and wick when necessary. One-year warranty on calibration.To set up either service, contact Clinical Support at 1-800-258-5361.

Cleaning and Calibration

The Cleaning and Calibration Program allows the customer to have their specific vaporizer cleaned and calibration and returned to them (service takes 1-2 weeks) without a loaner being issued. Customer covers cost of shipping.

Vaporizer Exchange Program

The Vaporizer Exchange Program eliminates downtime by having a remanufactured vaporizer that has been cleaned and calibrated sent to the customer. The customer then drains their current vaporizer and ships it back to Smiths Medical using the provided UPS label and shipping container. Their vaporizer is then cleaned, calibrated and placed into the Smiths Medical stock to be sent out to another clinic requesting the exchange program.

PressureEasy® Cuff Pressure Controller

Over inflation of the endotracheal tube cuff is a common occurrence in many veterinary practices. An over-inflated cuff can lead to localized areas of ischemia and possible pressure necrosis of the delicate tracheal tissue. Proper cuff inflation to the recommended 20-30 cm H_2O safeguards against excess pressure accumulation guarding against injury and improving patient outcomes.

FEATURES

- Guards against aspiration and tracheal damage
- Indicator window signals when cuff pressure is between 20-30 cm H2O
- Small, lightweight design is easy to use and helps to eliminate the need for an external manometer
- Reduction in leakage of waste anesthetic gas around the endotracheal tube
- Works with all AIRCARE® endotracheal tubes
- Auto-feedback feature boosts cuff pressure to facilitate proper sealing when high pressures are used during mechanical ventilation
- Designed as single patient use to help reduce the potential for infection and disease transmission
